

ISAAC AOKI

isaacaokilx@gmail.com · +44 7957 740375 · [linkedin.com/in/isaacaoki/](https://www.linkedin.com/in/isaacaoki/)

Molecular biologist with a background in cancer biology and epigenetics, seeking to develop professionally within medical writing. Strong foundation in evidence evaluation, data analysis, and structured literature review, with a high level of accuracy and attention to detail. Able to translate complex scientific information into clear, concise, and well-structured content. Resilient and self-motivated, with strong analytical and communication skills, and a commitment to producing high-quality, evidence-based outputs.

Education

University of Bristol MSc by Research in Cellular and Molecular Medicine	Bristol, United Kingdom Sep 2021 – Jul 2023
--	--

- Thesis: “Assessment of PRMT5 inhibition as a therapeutic strategy for Wilms’ tumour.”

University of the West of England, Bristol BSc (Hons) Biomedical Science; 2:1	Bristol, United Kingdom Sep 2017 – Jun 2020
---	--

- Key modules: Cellular Pathology and Oncology; Haematology and Transfusion Science; Medical Microbiology.
- Final year research project: “Investigation of thrombin inhibition using D-dimer” (first-class grade for written dissertation).

Technical Experience

School of Cellular and Molecular Medicine, University of Bristol Research Assistant	Bristol, United Kingdom Sep 2021 – Oct 2023
---	--

- Developed a novel therapeutic strategy for Wilms’ tumour by integrating *in-silico* modelling with *in-vitro* protein target validation.
- Identified two potential therapeutic targets through small-molecule screening and biochemical assay design, including discovery of drug synergism.
- Performed molecular techniques to evaluate small-molecule inhibitors in Wilms’ tumour cell lines at both protein and RNA level.
- Applied data analysis using Excel and GraphPad Prism to compare treatment conditions and show benefits of multi-drug over single-drug approaches.

School of Applied Sciences, University of the West of England Undergraduate Student Researcher	Bristol, United Kingdom Sep 2019 – Mar 2020
--	--

- Collaborated with graduate and postdoctoral researchers to develop accessible biomedical diagnostic devices.
- Formulated and optimised screening tests using the Yumizen G200 haemostasis analyser to improve diagnosis of thromboembolic disease.
- Presented findings regularly to supervisors and colleagues to support decisions on research direction.
- Conducted primary and secondary research on chemical sensor development and performed assays to monitor blood coagulation under different conditions.

Professional Experience

Beckman Coulter Diagnostics Medical Laboratory Assistant (Contract)	Bristol, United Kingdom Jan 2025 – Jun 2025
---	--

- Prepared and stained blood films for microscopic review and diagnosis.
- Developed practical understanding of NHS diagnostic pathways, including sample flow, turnaround times and bottlenecks affecting clinical decision-making.
- Collaborated with biomedical scientists and clinical staff, gaining clinical insights into how quantitative diagnostic values integrate with qualitative interpretation to support diagnosis.

- Operated and maintained blood analysers and biomedical equipment, monitoring quality control to ensure accurate results.

Atomic Leap

Performance Marketing Executive

United Kingdom (Remote and on-site)
May 2024 – Oct 2024

- Utilised platforms such as Google Ads and Google Analytics to monitor and analyse campaign performance, delivering continuous improvement.
- Worked with colleagues to design and apply digital, data-driven experiments, including A/B tests and audience segmentation, to improve public engagement and digital conversions.
- Designed and optimised landing pages, implementing HTML and JavaScript changes to improve user experience and conversion rates.

Internships

Klarity Health

Medical Article Writer (Intern)

Remote
Jun 2023 – Oct 2023

- Generated article ideas related to nutrition science and human physiology.
- Wrote and edited health articles to publication standard, with three articles published during the internship.
- Helped create writing templates with a team of writers and editors to support new interns.
- Performed structured literature searches using reputable scientific sources to produce accurate, evidence-based medical content while meeting strict deadlines.
- Developed clear, structured written outputs which aimed to convey complex scientific findings into accurate and reader-friendly content.

National Cancer Society Malaysia (NCSM)

Intern

Kuala Lumpur, Malaysia
Apr 2021 – Jul 2021

- Conducted a public health survey on attitudes towards cancer, highlighting how stigma and cultural factors limit early screening.
- Developed infographics and educational materials to support national prostate cancer awareness campaigns.
- Managed and analysed public health queries, identifying common medical concerns to guide engagement strategies.
- Performed research on public health communication, focusing on cancer education and behavioural change.

Skills and Languages

Laboratory and molecular biology: cell culture; qRT-PCR; flow cytometry; gel electrophoresis; small-molecule screening; biochemical assays; protein and RNA extraction.

Data analysis and statistics: GraphPad Prism; IBM SPSS Statistics; Microsoft 365 (advanced Excel); ImageJ.

Scientific and medical writing: Literature review and evidence synthesis; scientific summarisation; writing for specialist and lay audiences; editing and proofreading; referencing.

Digital and technical tools: Google Ads; Google Analytics; HTML and JavaScript; Adobe Photoshop; Canva.

Research and communication: Scientific writing and copywriting; hypothesis generation; primary and secondary research; oral and written communication; project and information management.

Soft skills: Analytical thinking; problem solving; interpersonal skills; leadership and self-management; teamwork and creativity.

Languages: English (native); Malay (advanced); Mandarin (advanced).
